

Quick Sort algorithm

Implement Quick Sort algorithm to sort an integer array in ascending order, and try to make it as fast as possible. Your algorithm must be iterative, there should be no recursion in your code.

Comment Your Name And Registration Number As The First Line In The Code

- You are required to build the functionality of an iterative version of Quick Sort algorithm and use to sort the arrays.
- You are prohibited from using the built in functions of any language
- **Your Code will be Reviewed to prevent any cheating :)**

Input Format

- First line:the size of the array
- Second line:the array to be sorted(numbers seperated by spaces)

Constraints

No Constraints

Output Format

output between two brackets,and each two numbers seperated by comma .
